NINA's Rights Retention Policy

The Norwegian Institute for Nature Research is an independent foundation that conducts research on nature and the interaction that takes place between nature and society.

NINA contributes to sustainable social development by delivering research-based and up-to-date knowledge about biodiversity, climate and society. Our motto is 'Cooperation and expertise for a sustainable future'.

NINA is recognised nationally and internationally for socially beneficial nature research. Our work is of high scientific quality and integrity, and we deliver knowledge for use in politics, administration and value creation. This is how we help society make sustainable choices.

Our work includes research and investigation, environmental monitoring, consulting and evaluation.

At NINA, it is a goal to deliver open knowledge through publication in accordance with the requirements set out by Norwegian public authorities, the EU and cOAlition S.

cOAlition S and the Research Council of Norway have defined a rights strategy where individual authors who have received funding from them retain the rights to one AAM version of the publication (at least the accepted AAM version), by imposing a cc-by license on it:

«This research was funded, in whole or in part, by The Research Council of Norway [6-sifret prosjektnummer]. A CC BY or equivalent licence is applied to any Author Accepted Manuscript (AAM) version arising from this submission, in accordance with the grant's open access conditions.»

To make it even easier for individual NINA researchers to publish openly, NINA has also adopted a rights retention policy which encompasses all scientific contributions made by NINA researchers. In this policy, NINA reserves the right to make available all accepted manuscripts in NINA's research archive:

«With this policy, NINA makes publishers of scientific publications aware that at least the accepted, peer-reviewed manuscripts of the institution's employees are made openly available online under a Creative Commons license. This applies regardless of subsequent agreements that are entered into with publishing houses and publishers.»

Plan S outlines three ways to publish openly:

- Publications published with Gold or Diamond open access
- Publications published with green open access
- Publications published under a transitional agreement with a publisher

As a general rule, all scientific publications and reports published in NINA's series by NINA authors are archived in NINA's Repository.

NINA's rights retention policy allows publications in subscription-based journals to be made openly available upon publication (without embargo) (green open access).

Common to the three publication methods: NINA recommends using Creative Commons licenses, preferably CC BY.
